The Alarm Monitoring System software is a powerful system suitable for use in security firms. It stores a database of all clients, bases, mobile backups and transmitters. The program picks an incoming alarm and displays all the details related to the alarm on monitoring screen. The monitoring screen will show the client, phone numbers, and the location of premises and so on. It eases the burden of having to go to the files to get the clients information so as to be able to respond to an alarm. The software is reliable, flexible and user friendly.
